

Sahil Sharma

MSc. Advanced Computer Science @ Newcastle Uni , AI Engineer / ML Specialist

Gurugram, India (willing to relocate) | +91-9872575024 | sahilvats2911@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY:

AI Engineer with expertise in designing, developing, and deploying **machine learning** and **deep learning models** with a focus on **LLMs** and **Agentic AI solutions**. Successfully evaluated **OpenAI models** improving efficiency by 70-100% and transformed **protocol generation workflows** reducing time from 24 hours to under 15 minutes. Proficient in **AI-powered development** using **ChatGPT**, **Copilot**, and **Cursor** for rapid prototyping and iteration while following **Agile** methodologies. Experienced in **Python**, statistical modelling, and **cloud deployment platforms** (AWS, Azure), with a talent for translating complex technical concepts for non-technical stakeholders. Skilled at model monitoring, documentation, and implementing compliant **validation processes** whilst ensuring alignment with business goals.

WORK EXPERIENCE:

- AI Engineer | Orynx AI (LLM fine tuning, Data Quality, Prompt Engineering)**

London, UK | March 2025 – November 2025

 - Spearheaded** benchmarking of 5+ specialised AI models (Stable Diffusion, LoRA, ControlNet), enhancing character consistency by 40% across generated images.
 - Formulated** data quality protocols that minimised artifact generation by 30% whilst upholding privacy compliance standards.
 - Accelerated** model inference time by 25% while refining output quality through strategic parameter tuning and **AI-powered development**.
 - Pioneered** 3 distinct character consistency approaches using **ChatGPT** and **Copilot**, attaining 85% visual consistency in final mock-ups.
 - Streamlined** model training resources by 20% via innovative data preprocessing and implemented **Agile** methodologies to ensure timely delivery.
 - Crafted** effective **AI prompts** for code generation and integrated solutions using **Cursor** for collaborative development and debugging.
- Data Analyst Intern| Onpoint Consulting (Cost perform (Tableau), Data Visualisation, Reporting)**

London, UK | August 2024 – October 2024

 - Generated** £35,000 in annual savings by analysing sales and expense data, validating findings against 5 performance metrics.
 - Designed** interactive Tableau dashboards visualising financial metrics for 5 departments, enabling model-based validation of pricing strategies.
 - Streamlined** reporting processes decreasing monthly financial reporting time from 15 hours to 10.5 hours (30% reduction).
 - Devised** pricing strategy adjustments through competitive analysis, yielding a 5% profit margin improvement worth £78,000 annually.
 - Facilitated** cross-functional collaborations to establish 12 KPIs and construct performance monitoring solutions used by 25+ stakeholders.
- Software Developer | Freelance (Dart, Flutter, Google Firestore)**

Gurgaon, India | May 2021 – June 2022

 - Implemented** analytics tracking into 3 Android applications, validating 15+ user engagement metrics for 8,000+ monthly active users.
 - Analysed** user interaction data to identify key usage patterns, prioritising 6 high-impact features based on statistical validation.
 - Mapped** regional adoption using geolocation data from 12,000+ data points, validating targeting strategies that boosted engagement by 15%.
 - Enhanced** database queries through systematic performance testing, accelerating response time from 1.2s to 0.9s (25% improvement).

PROJECTS:

- Large Language Model (LLM) for generating protocol scripts | Python, Analytics, API, Statistical Testing, Prompt Engineering**

 - Architected** an **agentic AI system** using **LangChain** and **OpenAI models** (GPT-3 vs. GPT-4) for laboratory protocol generation.
 - Evaluated** performance metrics across 250+ test cases, documenting 70-100% efficiency improvements with newer models.
 - Developed** quantitative validation framework with 8 performance indicators and constructed visualisation suite featuring 5 interactive charts.
 - Transformed** process workflows that reduced script generation time from 24 hours to under 15 minutes, validating a throughput increase of 96%.
 - Engineered** sophisticated **AI prompts** for **ChatGPT** while employing **AI-powered development** techniques with **Copilot** and **Cursor** following **Agile** methodologies.
- Mobile Price Classification using AWS Sagemaker | AWS, Python, sci-kit-learn, boto3, pandas**

 - Created** end-to-end **machine learning pipeline** on AWS SageMaker with comprehensive validation checkpoints, achieving 88% accuracy across 4 price categories.
 - Executed** exploratory data analysis on 2,000 mobile device records, validating 7 key pricing determinants from 20 available features.
 - Improved** model performance by 15% through feature engineering and rigorous validation techniques, elevating F1-score from 0.76 to 0.87.
 - Produced** interactive validation dashboard communicating model assumptions, limitations and performance metrics to 8 non-technical stakeholders.
 - Launched** validated model as API endpoint with 200ms latency, handling 100 concurrent requests with 99.5% uptime.
- AI-Based HR System | TypeScript, NLP, Machine Learning, Node.js**

 - Developed** an end-to-end **AI-powered HR system** that automated candidate screening, reducing hiring time by 45% and improving quality-of-hire metrics by 30%.
 - Applied** NLP algorithms to analyse 1,000+ resumes and job descriptions, creating an **intelligent matching system** with 85% accuracy in identifying suitable candidates.
 - Engineered** a recommendation engine that increased internal mobility by 25% through skill-based employee-to-role matching across departments.
 - Optimised** development workflow using **ChatGPT** and **Cursor** to generate boilerplate code while managing the project through **Agile** ceremonies.
 - Refined AI prompts** systematically to improve code generation quality with **Copilot**, resulting in a 30% reduction in debugging time.

EDUCATION:

- MSc in Advanced Computer Science**, Newcastle University

September 2022 – September 2023

Highlight: Specialised in **AI/ML**, statistical modelling, **model validation** frameworks, and **natural language processing** with focus on systematic risk assessment through advanced analytics coursework.

SKILLS:

- AI & ML:** Model Development • **LLM Fine-tuning** • **Agentic AI Systems** • **Prompt Engineering** • **AI-powered development** • NLP • Model Validation • Performance Optimisation • MLOps • CI/CD for ML

Technical Analysis: Hypothesis Testing • Bayesian Inference • Cross-validation • **Feature Engineering** • Uncertainty Quantification • Stakeholder Communication • Documentation

Programming & Tools: PYTHON (NumPy, Pandas, Scikit-learn, TensorFlow, PyTorch) • SQL • **JavaScript/TypeScript** • **LANGCHAIN** • HUGGING FACE • **OPENAI API** • **ChatGPT** • **GitHub Copilot** • **Cursor** • MLflow • AirFlow

Infrastructure & Methodologies: AWS (SageMaker, Lambda, S3) • Azure ML • Google Cloud • Snowflake • PostgreSQL • MySQL • BigQuery • Git • GitHub Actions • **Agile/Scrum** • Kanban • JIRA
